

# **VistA Internationalization Open Source Project Group— Localization Using Kryvich's**

**Sam Habil, PharmD**

OCTOBER 1, 2018

# Kryvich's Localizer

- <https://sites.google.com/site/kryvich/localizer>
- Why we chose this
  - Interoperable with ITE
  - Limited source code changes specific to get it working
  - Simple output format

# Bootstrapping Process

- Add KDL tools to our source tree
- Need to compile CPRS first and create initial set of translation files
  - Run kdlscan.exe against CPRS; and it will give you the files
  - Copy these files to our repository into new folders

# Boot Strapping Process

```
kd1scan.exe "...\\..\\..\\..\\..\\..\\build\\CPRS\\CPRS-  
Chart\\CPRSChart.exe"
```

K.D.L. Scanner 4.1: gets localizable strings from  
EXE, BPL, DLL and DRC files

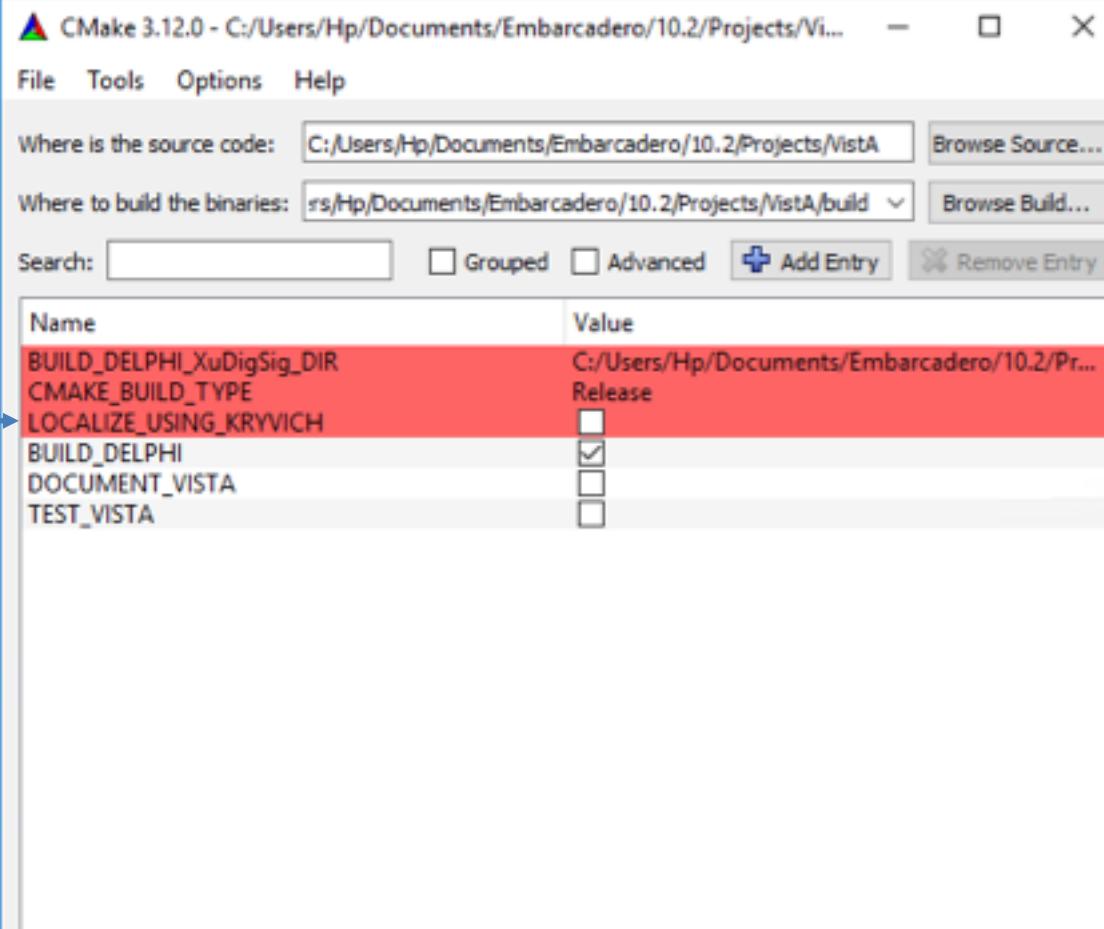

```
=====
```

```
=====
```

Old language file was found. SVCS activated...

Language file "...\\..\\..\\..\\..\\..\\build\\CPRS\\CPRS-  
Chart\\CPRSChart.lng" created.

# CMake files modified

A screenshot of the CMake 3.12.0 application window. The title bar reads "CMake 3.12.0 - C:/Users/Hp/Documents/Embarcadero/10.2/Projects/VistA...". The menu bar includes File, Tools, Options, and Help. The main area shows configuration settings:

Name	Value
BUILD_DELPHI_XuDigiSig_DIR	C:/Users/Hp/Documents/Embarcadero/10.2/Pr...
CMAKE_BUILD_TYPE	Release
LOCALIZE_USING_KRYVICH	<input type="checkbox"/>
BUILD_DELPHI	<input checked="" type="checkbox"/>
DOCUMENT_VISTA	<input type="checkbox"/>
TEST_VISTA	<input type="checkbox"/>

A blue arrow points to the row for LOCALIZE\_USING\_KRYVICH. A message at the bottom says: "Press Configure to update and display new values in red, then press Generate to generate selected build files." Below the table are buttons for Configure, Generate, and Open Project, and a note about the Borland Makefiles generator. A status message at the bottom says "Configuring done".

UTF-8 encoded sample plain-text file

Markus Kuhn [ `ma'rkus ku:n] <mkuhn@acm.org> – 1999-08-20

The ASCII compatible UTF-8 encoding of ISO 10646 and Unicode plain-text files is defined in RFC 2279 and in ISO 10646-1 Annex R.

Using Unicode/UTF-8, you can write in emails and source code things such as

Mathematics and Sciences:

■  $\exists \forall da = Q, n + \infty, \sum f(i) = \prod g(i), \exists x \exists y: \exists z \exists w: \neg x \neg y = \neg \neg x \neg y, a \otimes \neg b = \neg (\neg a \otimes b)$

# Resource Strings

- The way to localize embedded strings in CPRS
- Steps
  - Modify CPRS source code to convert the embedded strings to resource strings
  - Compile
  - Run kdlscan.exe on CPRSChart.exe
  - Copy CPRSChart.lng to Translations folder
  - Run Ingupdate.exe to update the translated file
  - Update the translation in a text editor
  - Copy back to CPRS runtime folder (or use Cmake)
